**LOCAL MEDICAL and DENTAL SUPPLY MANUFACTURING FIRM ENTERS AGREEMENT FOR WORLDWIDE DISTRIBUTION OF AN INNOVATIVE AND TECHNICALLY SUPERIOR BARRIER TEXTILE PRODUCT.**

**MRSA (Methicillin-Resistant Staphylococcus Aureus) infections are increasing. Controlling and containing these drug resistant staph infections aka, 'superbugs' is a major concern to hospitals, clinics and all healthcare workers.**

ProSafe® Products recently entered into an agreement with Vestagen Technical Textiles, Inc. of Orlando, Florida to incorporate Vestex® a remarkable new fabric, in manufacturing its' line of products. Vestex® was classified by the FDA as a Class II medical device early this year. Rigorous clinical studies have documented significant reductions in accumulation of MRSA on healthcare workers clothing, versus workers with non-protective clothing.

Apparel constructed with Vestex® protects workers in two ways:

- Fluid Barrier: The barrier aspects of the fabric inhibit migration of liquid through the surface of the fabric including body fluids, particulate matter and micro-organisms.
- Antimicrobial Activity: The fabric is impregnated with an EPA registered antimicrobial agent that inhibits growth of bacteria on the fabric.

ProSafe Products was founded by Laura K. Bradford, its President. It was the first company to enter the Small Business Development Center's Incubator Program in the fall of 1987. The company manufactures a line of products including apparel, protective drapes for patients, and equipment covers. They are located on South 7<sup>th</sup> Street, Grand Junction.

**Availability of Vestex® barrier apparel by ProSafe Products is anticipated by July, 2018.**
